

BaTh Development of a Toolbox for Evaluation of Object Lists

Task description in English

- Object lists are a common representation for perception systems and corresponding models
- Evaluating these with respect to reference data is challenging since many metrics are available
- This work implements a toolbox for application of metrics
- Objective is simple application and comparison of multiple metrics

Task Details

- Research on representations, perception, modeling, metrics
- Specification of data format and implementation framework
- Selection of suitable metrics
- Implementation of metrics in framework
- Application and evaluation of selected metrics
